

Vantav

The AI operations platform for Gen Z and small-business merchants selling across Shopify, TikTok Shop, Amazon, and beyond.

What Vantav does

Vantav replaces spreadsheet chaos and channel-specific dashboards with one place to see true profit, catch problems early, and act on recommendations you control.

- **Unified channels:** Connect Shopify, TikTok Shop, Amazon, and eBay into a single sales and inventory view.
- **True profit:** Net profit after COGS, shipping, marketplace fees, payment processing, ad spend, refunds, and operating costs.
- **Attention alerts:** Margin compression, refund spikes, stockouts, and runway issues surface automatically.
- **Recommended actions:** AI-generated drafts with confidence scores, evidence, and projected impact.
- **Approval gate:** Nothing executes in a live store until the merchant approves, modifies, or dismisses it.

Then vs. now

Capability	Before	Now
Profit view	Revenue-only reports, no clear net margin per SKU or channel.	True profit waterfall with per-channel, per-SKU contribution.
Channel management	Separate logins and manual spreadsheets for each storefront.	One dashboard with unified order, cost, and channel analytics.
Decision support	Merchant had to spot problems and decide what to do alone.	AI Assistant surfaces evidence-backed recommendations with one-click approval.
Action execution	Manual edits, no guardrails, high risk of mistakes.	Approval-first action gate with business-memory guardrails.

Capability	Before	Now
Forecasting	Basic inventory counts, no reorder signals.	SKU velocity, stockout dates, and recommended reorder dates with cash-reserve estimates.
Verification	No way to know if an action actually worked.	Before/after metrics captured for every approved action.
Design	Generic admin-like interface.	Dark, purple-accented commercial dashboard with a three-pillar overview and floating assistant.

How it works

Workflow: Ingest → True Profit → Detect → Evidence → Recommend → Approve → Execute → Verify → Learn

Data from every storefront, ad account, supplier, and cost feed is normalized into a single ledger. The system calculates contribution profit, runs forecasting and rules checks, and drafts actions with evidence. The merchant sees the recommendation, the expected impact, and the reasoning, then decides what happens next.

Why it stands out

- **Channel-agnostic:** Shopify Sidekick and most competitors are tied to one platform. Vantav works across all major channels.
- **Profit-first:** Most dashboards lead with revenue. Vantav leads with net earnings and margin, so decisions protect cash.
- **Merchant-in-control AI:** Every recommendation is a draft, not a command. The approval gate keeps the human in the loop.
- **Built for lean operations:** Small teams get an operations layer that normally requires a CFO, logistics manager, and ad buyer.

Target market

Gen Z entrepreneurs and small-business owners running multi-channel commerce with thin margins and no time to reconcile spreadsheets. They need one command center that tells them what is happening, what needs attention, and what to approve next.

Beta readiness

- Core dashboard and dark theme live.
- Three-pillar overview: True Profit, Attention Alerts, Recommended Actions.
- Action compliance card with confidence, evidence, and approve/dismiss controls.
- Floating AI Assistant widget with page-specific recommendations on all dashboard pages except Overview.
- Performance benchmarks passed: rules engine ~9.6 μ s per SKU, COO diagnostic ~0.013 ms per SKU.

What's next

- Billing and payment pages for paid tiers.
- Real marketplace write-backs for ad spend, inventory, and purchase orders.
- Public beta waitlist flow and admin approval gates.

System rating: 8.5/10 — the data, profit, evidence, rules, forecasting, approval, and learning layers are in place. The remaining gap before full commercial launch is billing/subscription infrastructure and live channel write-backs.
